RAZIONALE:
Anaphylaxis is an acute allergic reaction to certain food items and insect stings. The condition develops in approximately 1-2% of the population. The most common allergens are nuts, eggs, cow’s milk and bee or other insect stings, and some medications.

Aims:
- To provide a safe and healthy school environment that takes into consideration the needs of all students, including those who may suffer from anaphylaxis.

Implementation:
- Anaphylaxis is a severe and potentially life-threatening condition.
- Signs and symptoms of anaphylaxis include hives/rash, tingling in or around the mouth, abdominal pain, vomiting or diarrhoea, facial swelling, cough or wheeze, difficulty breathing or swallowing, loss of consciousness or collapse, or cessation of breathing.
- Anaphylaxis is best prevented by knowing and avoiding the allergens.

Our school will manage individual anaphylaxis needs by:-
- providing anaphylaxis update training for staff each term at staff meetings
- making sure all new staff are given anaphylaxis training as part of their induction program
- identifying susceptible students and knowing their allergens
- informing the community about anaphylaxis via the newsletter
- not allowing food sharing, and restricting food to that approved by parents
- keeping the lawns well mown, ensuring children always wear shoes, and not allowing drink cans at school.
- requiring parents to provide an emergency management plan developed by a health professional and an EpiPen if necessary, both of which will be maintained in the first aid room for reference as required
- ensuring staff are provided with regular professional development on the identification and response to anaphylaxis and the proper use of an EpiPen.

Our school will manage safety and risk requirements as follows:
- Initially the school will request that parents do not send those items to school if at all possible; that the canteen eliminate or reduce the likelihood of such allergens, and the school will reinforce the rules about not sharing and not eating foods provided from home.
- Where staff or students are known to have serious life threatening reactions the school will ban certain types of foods (eg: nuts, citrus fruit) as part of minimising the risk for these school community members.

Evaluation:
This policy will be reviewed as part of the school’s multi-year review cycle.
